

## AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 8, line 19 with the following amended paragraph:

--Referring to Figures 5, 6 and 7, an end portion of the distribution bar 62 and feeder bar 64 assembly is shown. An end piece 70 of the feeder bar 64 is located at the distal end of the feeder bar 64. Referring also to Figures 5-7, end pieces 70 are located at opposite ends of the feeder bar 60 and are removable to allow for the diffuser 90 to slide into the distribution bar 62 in order to assemble the distribution system 60. An insert 71 projects from each end piece 70 to plug into an end of bore 68 of the distribution bar 62. The insert 71 helps to secure the end piece 70 in place and additionally provides a seal so that flowable substance does not escape from the ends of the distribution bar 62. Fasteners are located through countersunk apertures 72 for securing the end pieces 70 to the feeder bar 64.--
